

PRESS RELEASE

FOR IMMEDIATE RELEASE

Launching at ALL IN: AI is transforming how businesses approach pricing – Professor Maxime Cohen’s new book explains how.

MONTREAL, September 14, 2026 – [Maxime Cohen](#), Scale AI Chair Professor at McGill University; Academic Director of the Bensadoun School of Retail Management, will unveil his new book, *Pricing in the Age of AI*, at ALL IN, Canada’s largest AI and technology event, ahead of its publication by MIT Press on September 29, 2026.

During a press conference at ALL IN’s Scale AI Studio in Montreal, Prof. Cohen will discuss how advances in AI allow businesses to adjust and personalize prices in real time, and what the growing use of AI-powered pricing means for businesses, consumers and society.

Drawing on academic research and real-world applications, *Pricing in the Age of AI* examines the opportunities and risks created by AI-powered pricing as big data, machine learning and generative AI reshape how organizations set prices. It also explores the implications of these technologies for competition, consumer protection, and discrimination.

“AI is changing not only the tools companies have at their disposal, but also how they approach fundamental decisions such as pricing,” said Prof. Cohen. “With *Pricing in the Age of AI*, I hope to help leaders understand what these technologies make possible and how they can use them responsibly to create value for their organizations and their customers.”

Prof. Cohen’s research sits at the intersection of pricing, data science, AI, retail, and operations. At McGill, his work bridges academic research with industry applications, examining how data-driven approaches and AI tools can help organizations improve decision-making and boost productivity.

The ALL IN press conference will offer journalists an opportunity to speak with Prof. Cohen about the real-world implications of AI-powered pricing and the questions it raises for businesses, consumers and regulators.
